

Product Information

Fast-curing surface treatment to improve adhesion to printing plates.

Product Description

tesa[®] 60120 can be used to improve the adhesion of tesa[®] Twinlock or tesa[®] Softprint offering to various substrates especially PET stabilization films from photopolymer printing plates.

Application Fields

Our tesa® 60120 is recommended for using on the backside of printing plates. This product can be used to significantly improve the bonding strength of tesa® Twinlock or tesa® Softprint. Testing shows significantly higher peel adhesion values.

Properties/Performance Values

Consistency liquid
Density
0.82 g/cm³

Additional Information

Before using our adhesion promoter, the bonding surface should be free of dust, grease, oil, moisture, and other contaminants. Therefore, we highly recommend cleaning the substrate with a lint-free cloth using 100 % of IPA.

Once the surface has been cleaned, you can go ahead and apply our tesa® 60120 with the Pen. The relevant surface should be coated thinly with adhesion promoter in order to reach the highest bonding performance. It is important to wait at least one minute in order to give solvents time to evaporate. Please make sure to keep the prepared surface free of contaminants prior to the application.

For further information and advice on safe handling please refer to our safety data sheet (SDS), which is available upon request.

Disclaimer

tesa[®] products prove their impressive quality day in, day out in demanding conditions and are regularly subjected to strict controls.
