

The background of the advertisement shows two men in a factory or industrial setting. The man on the left is wearing a light blue button-down shirt and has a beard. The man on the right is wearing a blue polo shirt, glasses, and is smiling. They are both looking at a roll of pink and white striped tape. The man on the right is holding a large sheet of white material with a pink stripe, which is part of a larger roll of film or tape. The setting appears to be a film processing or manufacturing plant, with various pieces of equipment visible in the background.

# Specialty tapes for film converting

A complete range of splicing tapes and auxiliary assortments for maximized process efficiency at film converters

# Our value proposition – your benefits

## Partnering to solve industry challenges

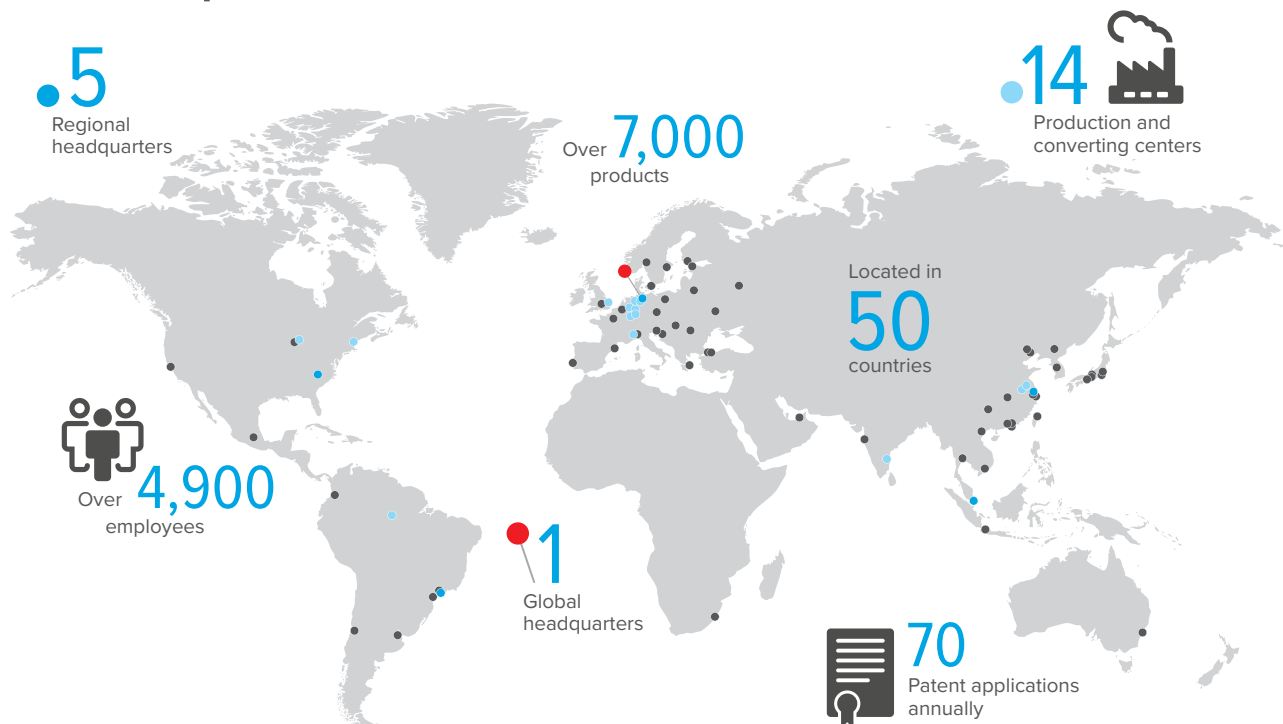

Our dedicated team of more than 100 sales experts worldwide can help you improve overall efficiency by recommending solutions that optimize your existing set-ups. We are also happy to discuss specific product or testing needs whenever required and continuously strive to shape a business relationship of trust and reliability.

## Extensive R&D and lab support

Worldwide, we have 500 specialized R&D engineers transforming innovative ideas into new products and improving existing solutions. Customer needs, industry trends, as well as process and raw material innovations form the basis for our daily work to develop state-of-the-art solutions for the film producing, printing, and converting industries.

## Global presence

tesa® products prove their impressive quality day in, day out in demanding conditions and are regularly subjected to strict controls. All technical information and data above mentioned are provided to the best of our knowledge on the basis of our practical experience. They shall be considered as average values and are not appropriate for a specification. Therefore tesa SE can make no warranties, express or implied, including, but not limited to any implied warranty of merchantability or fitness for a particular purpose. The user is responsible for determining whether the tesa® product is fit for a particular purpose and suitable for the user's method of application. If you are in any doubt, our technical support staff will be glad to support you.

# Expertise by your side

Increasing demands on product quality and production efficiency as well as a market need for a wide range of different film materials call for a reliable partner for film converting processes. With over 125 years of experience as a global supplier of adhesive solutions and as the inventors of tesa® EasySplice for integrated flying splices, we are your reliable partner for film converting excellence.

# tesa® EasySplice FilmLine

With the invention of tesa® EasySplice, we revolutionized paper production and converting industry processes. Reliable splicing at the highest speeds combined with easy and fast job preparation was made possible, resulting in maximized process efficiency. Our tesa® EasySplice FilmLine assortment is specifically developed for film converters. The combination of tailored contact adhesives, reliable splitting strip solutions, and distinct product backings provides outstanding splice performance even on critical non-polar film materials.

### Fast and easy preparation

**Underneath**  
Apply the tape under the top layer of the film reel. Then remove the upper part of the liner.

**On top**  
Attach the top layer onto the exposed adhesive of the tape.

**Remove**  
Tear off the excess film following the line of the remaining section of the liner.

**Finish**  
Before accelerating the reel carefully remove the lower part of the liner.

**Save time**  
For reel preparation, apply just one straight line of tape – no extra tape, no additional split labels necessary.

**Accelerate production**  
Run even difficult-to-splice substrates at full machine speed.

**Reduce waste**  
Higher splice performance means less waste! tesa® EasySplice FilmLine products ensure safe closure of the reel during acceleration and precise opening after contact.
