

## **tesa® Smart Mounting System – The smart way of mounting**

**The world around us has become fast-paced. Every day, we are exposed to new impulses, and we therefore welcome amenities that make our life easier and more flexible – especially in our stressful everyday office life. What if today even mounting could be as easy and quick, yet with a reliable hold?! The tesa® Smart Mounting System offers a modern solution.**

### **The invisible office helpers for transparent surfaces**

Would you like to attach a calendar to the window in your office? Best use the tesa® Transparent Adhesive Hooks with the transparent tesa Powerstrips®, which can be removed without a trace. They allow you to mount objects of 0.2 kg up to 1 kg quickly and easily, and just as smoothly remove them or replace them with other ideas.

### **tesa® Adhesive Nail – reliable mounting and traceless removal**

The foundation of the Adhesive Nail is the advanced tesa Powerstrips® technology. The adhesive solution provides reliable hold on smooth surfaces, such as tiles, and can now – for the first time and thanks to a newly developed strip – also be used on wallpaper or plaster. Unlike a conventional nail, it can be removed without leaving a trace. Thanks to its innovative holding device, you may mount picture frames quickly and easily – without using tools. The type of the strip varies depending on the surface and the holding power of a single Adhesive Nail ranges from up to 2 kg for wallpaper and plaster up to 4 kg for tiles.

A particularly smart alternative is offered by the **tesa® Adjustable Adhesive Nail**. It is height-adjustable; thus, pictures and other objects can be easily aligned.

## **tesa® Adhesive Screw – Reliable hold, even on rough surfaces**

For mounting objects on rough, solid surfaces, such as brick or concrete, there now are Adhesive Screws with holding devices in various forms. The rectangular Adhesive Screws with a holding power of up to 5 kg are perfect – for example – for mounting a shelf on a stone wall. The Nie-wieder-Bohren technology, in combination with the holding devices made of pressed copper beads, guarantees a strong hold. The use of several Adhesive Screws can increase the holding power accordingly.

Unlike conventional nails and screws, these smart alternatives can all be removed without leaving a trace and are simply reusable by using a new strip.

### **Ideal products for any surface**

The current tesa range offers a total of 48 adhesive solutions, which DIY stores, as well as grocery and stationary shops display in a new and clear style, divided by different surfaces: transparent, such as glass; smooth, such as tiles; sensitive, such as wallpaper or plaster; and rough surfaces, such as brick or concrete.
