## productinformation

## tesa® 52310

For the mounting of photopolymer plates, also on compressible sleeves

tesa® 52310 (transparent), tesa® 52315 (yellow), tesa® 52320 (white) and tesa® 52325 (pink) are a range of tesaprint® plate mounting solutions, each of a different thickness category.

The unwind characteristics of all four tapes offer easier tape mounting. The structured PP-liner also prevents the formation of air pockets when plate mounting. Plates are easily repositioned during mounting as the full adhesion of the tape only becomes effective during the print run.

The high adhesion and good shear resistance of these tapes ensure that there is no plate movement or edge lift problems, even at high speeds and on extended print runs. On demounting, there are no adhesive residues on the plate or the cylinder.

tesa® 52310 is also especially well suited to the mounting of photopolymer plates on compressible sleeves.

## Main Application

The mounting of photopolymer plates in flexographic printing, especially on compressible sleeves

## Technical Data

Backing material

Thickness category

PVC film  $100~\mu m$ 

Type of adhesive

Type of liner

natural rubber

PP
