

tesa® 52916

For the mounting of photopolymer plates on compressible sleeves

tesa® 52916 is specially designed for mounting photopolymer plates (1.14mm [0.045"] or 1.70mm [0.067"]) on compressible (foam) sleeves. It is a double-sided tape with differential adhesion values between each side.

High open side adhesion ensures a secure bond when applying directly to the foam coated sleeve.

The tailored adhesion on the plate side guarantees that plates can be repositioned and demounted easily, but are held securely during printing.

Due to its minimal thickness, the polyester film backing provides the ideal carrier between both print plate and sleeve. This eliminates any interference, allowing the sleeve to compress and recover freely whilst printing.

Main Application

tesa® 52916 is specially designed for mounting photopolymer plates (1.14mm [0.045"] or 1.70mm [0.067"]) on compressible (foam) sleeves.

Technical Data

▪ Backing material	PET film	▪ Type of adhesive	acrylic
▪ Thickness category	100 µm	▪ Type of liner	glassine
